

10m³/h nitrogen generator equipment for HVAC coil testing applications in the Middle East

We recently supplied one of our nitrogen generators to a prominent company in the Middle East. This company manufactures HVAC coils and uses high purity and high pressure nitrogen to test the coils for leaks. They are very happy with our nitrogen equipment and we are equally grateful to them for giving us the opportunity to provide this service. XITE's nitrogen generators are helping them to produce a high quality product.

HVAC applications require high purity and high pressure nitrogen. Inert nitrogen is widely used in this industry for initial cleaning of coils and for leak testing prior to refrigerant charge.

This particular XITE nitrogen generator has the following specifications:-

Nitrogen capacity: 10 NM³/hr

Nitrogen purity: 99.5%.

Gas delivery pressure: 50 Barg
