

Nitrogen generator for food packaging, 160 m³/h, purity 99.5%, working pressure 5 KG/CM²

Suzhou XITE has installed a 160 m³/h nitrogen generator for food packaging with a purity of 99.5% and an operating pressure of 5 KG/CM².

According to research, oxygen and moisture are the main culprits in food spoilage, with its components combining or "oxidizing" with oxygen. The most effective way to prevent food from being damaged by oxygen is to remove it and replace it with an inert gas, a common inert gas being nitrogen, a gas whose application in casual food packaging is

now well known. The shelf life of snack foods such as chips, extruded snacks, breakfast cereals, nuts and other dried fruits is improved by expelling the air around the food in the package.

The range of food packaging products sold by Suzhou XITE are

Model	Capacity m ³ /h
XTFD-150	160 m ³ /h
