

Nitrogen generator for food packaging, 100 m³/h, purity 99.9%, working pressure 5 KG/CM²

XITE Engineering Ltd. installed a 100 m³/h nitrogen generator for food packaging with 99.9% purity and 5 KG/CM² operating pressure.

According to research, oxygen and moisture are the main culprits in food spoilage, with its components combining or "oxidizing" with oxygen. The most effective way to prevent food from being damaged by oxygen is to remove it and replace it with an inert gas, a common inert gas being nitrogen, a gas now well known for its use in casual food

packaging. The shelf life of snack foods such as chips, extruded snacks, breakfast cereals, nuts and other dried fruits is improved by expelling the air around the food in the package.

The range of food packaging products sold by Suzhou XITE are

Model	Capacity m ³ /h
XTFD-100	100 m ³ /h
