

300m³/h membrane nitrogen generator for autoclave

Did you know that many autoclaves maintain a nitrogen atmosphere during use?

XITE Company's customer is using 2 units of 300 m³/h nitrogen each to maintain a 24 x 7 nitrogen supply at their facility. The customer's main objective is to exclude oxygen and maintain an oxygen level below 5% in their autoclave while their high temperature, high pressure process is curing carbon fiber parts. Therefore, our 98% membrane nitrogen generator fully met the customer's requirements. (Oxygen levels below 2%).
